

INCIDENT ANALYSIS AND INTERVENTION

GLOBAL FLEET CHAMPIONS

Reporting, recording and analysing crash data can help to identify risks before a serious crash occurs. If an employee is involved in a crash, it's important to put their safety and welfare first and show that you are a compassionate and caring employer.

DATA RECORDING

Onboard electronic recording systems, also called telematics, can record a huge amount of data about journeys, vehicles and driver behaviours.

Recording and analysing data can help you to identify and address risky driving behaviour.

Investigating the cause of crashes may help prevent future crashes from occurring.

POST-CRASH ACTION AND CARE

If someone is hurt in a crash, they must get medical help as quickly as possible. A few minutes' delay treating crash victims can make the difference between life and death.¹

Simple first aid actions to help someone injured in a crash can save lives. This includes clearing their airway or applying pressure to a bleeding wound.

Road crashes cause great distress to victims and their families. It is common to experience feelings of anger, shock and guilt. Some people experience post-traumatic stress disorder (PTSD).

Emotional or practical support can help people who are bereaved or injured in a crash to understand their symptoms and cope with their grief.

RESPONSIBLE ORGANISATIONS...

Prioritise people's safety and welfare as caring, compassionate employers.

Have policies supporting drivers to report all crashes they are involved in.

Fit telematics systems to vehicles to identify and address risky driving behaviour.

Record as much data as possible from crashes involving their vehicles.

Support employees, their families or other people affected by crashes involving their vehicles.

WHAT CAN YOU DO?

Fit all vehicles with cameras and give drivers guidance on what to do if they are involved in a crash.

Give drivers first aid training so they can help if they see or are involved in a crash.

Provide drivers with first aid kits, phones and high-visibility vests.

Offer emotional and practical support to help anyone affected by a crash cope with their symptoms.

Give employees financial help or time off to recover if they are injured in a crash.
